Changing a topic configuration:

- Brokers have defaults for all topic configurations
- These parameters impact performance and topic behavior.

You can see configs when you describe a topic.

How to list configs -

```
kafka-configs.sh --bootstrap-server localhost:9092
  --entity-type topics --entity-name configured-topic --describe
```

ALTER CONFIG.

```
.kafka-configs.sh --bootstrap-server localhost:9092
  --entity-type topics --entity-name configured-topic
  --add-config min.insync.replicas=2 --alter
```

DELETE CONFIG

———— " ————————————

```
--delete-config.
```
