★ Starting Kafka - and zookeeper

ed   kafka-vi...

1. zookeeper - server - start.sh config / zookeeper.properties.

2. Change data directory under config/zookeeper.properties.
   dataDir = /tmp/zookeeper

   dataDir = $\downarrow$ fullpath/ data /zookeeper   create a new data dir and
                                                                  then set dataDir to that

3. Update config/server-properties., create a new kafka dir to store logs.
   set   log.dirs = full path to kafka directory
                       /User/harshali/kafka../data/kafka

4.   kafka - sever-start   config / server.properties.

   Note: If you get port exception, you need to free that port first.
